

Non JIS material definition is listed on P.1351 - 1352

The inside diameter is finished by electric discharge. The angle (K°) and the secondary sprue (A°) are roundly connected.

• Calculation for the inlet diameter * α * $\alpha = 2\{(L-G)\tan\frac{A^\circ}{2} + G\tan\frac{K^\circ}{2}\} + P$

The dimension acquired using the above calculation is the theoretical (reference) value.
